

CANIAS ERP can easily keep up with the branch leaders

August 2006 - IAS GmbH

This year in spring the IAS GmbH participated in an ERP-comparison that was initiated by the GPS (a society for testing software) from Ulm, Germany. The task was to present a testscenario close to reality within a company group with several companies and works. That is, a real intercompany transaction with the whole complexity in Material Requirements Planning, Production and Purchase.

Despite of the very short preparation period, compared to the competitors, that certainly costed the one or the other percentage point, the Industrial Application Software GmbH from Karlsruhe proved with CANIAS ERP that it is possible to keep up with the branch leaders even as very innovative but rather small system provider. CANIAS ERP was ranked 6th of 12 participating solutions just behind the world's largest providers: Oracle, SSA, SAP, IFS and JD-Edwards but still before Movex, PSIpenta, proalpha, infor:com, ClassiX and Synerp.

The test was divided into 3 categories: functionality, usability and flexibility. And it is worth remarking that CANIAS ERP even takes first place in as far as flexibility is concerned. Thus, CANIAS ERP absolutely sets standards in fields like system openness, technology and scalability which mean maximum possible security of investment. If you then consider the unrivalled favourable price as a further decision criterion, CANIAS ERP is currently one of the most cost effective complete ERP-solutions at the market.

According to Mr. Schmid from GPS the products have become very similar with respect to their functionality. Therefore, criteria like system handling, flexibility, individuality, all-in-one-functionality and the price play an as important role when choosing a new solution.

CANIAS ERP scores in this areas as well. The enormously high functionality with modules that are all proprietarily developed guarantees an extremely high integration without data redundancies. As CANIAS ERP is in addition to that also platform independent it is currently the only complete ERP-solution that also runs under the database MySQL which means another considerable saving.

CANIAS ERP has got everything that medium-sized businesses need today.
